

The data shows me the average salary for college graduate student in different major.

I interest in these data, because I am going to start a project win this topic.

No, I did not use online tutorials for this question. But I went over our class note to read the URL. in this data, I found the weather in Oklahoma and if you run the code in R, it will show me the weather for today and will forecast for a couple of days. It may useful for me, if I just want to open R instead of a weather page.

yes I used a package called "owmr"
